EX-6

DELUGE SCRIPT – BASICS 240701176

HARISHNI.B

1. Aim

To study the basics of Deluge scripting in Zoho Creator and understand how Deluge can be used with variables, data types, operators, expressions, conditional statements, Lists, and Maps to implement application logic.

2. Introduction

Deluge (Data Enriched Language for the Universal Grid Environment) is the scripting language used in Zoho applications to automate tasks and implement application logic. It provides simple programming constructs for storing values in variables, performing calculations, working with data types, using operators and expressions, and controlling program flow. Deluge scripts can be used to process data, perform calculations, validate information, and automate actions in Zoho Creator. The Deluge Script Basics activity provides practice through challenges covering Variables, Data Types, Operators, Expressions, Comments, Conditionals, List, and Map.

3. Objectives

- To understand the basic syntax and structure of Deluge scripts.
- To learn how to declare and use variables in Deluge.
- To understand data types and operators used in Deluge expressions.
- To perform calculations and create expressions using variables.
- To learn the use of conditional statements for decision-making.
- To understand how Lists and Maps can be used to organize data.
- To develop basic problem-solving and automation skills using Deluge.

4. Advantages

- Easy-to-understand syntax makes Deluge suitable for beginners.
- Helps automate repetitive tasks in Zoho applications.
- Supports calculations, expressions, conditions, and data processing.
- Can be used to implement customized application logic.
- Works closely with Zoho Creator forms, reports, and application components.
- Reduces manual work by automating application processes.

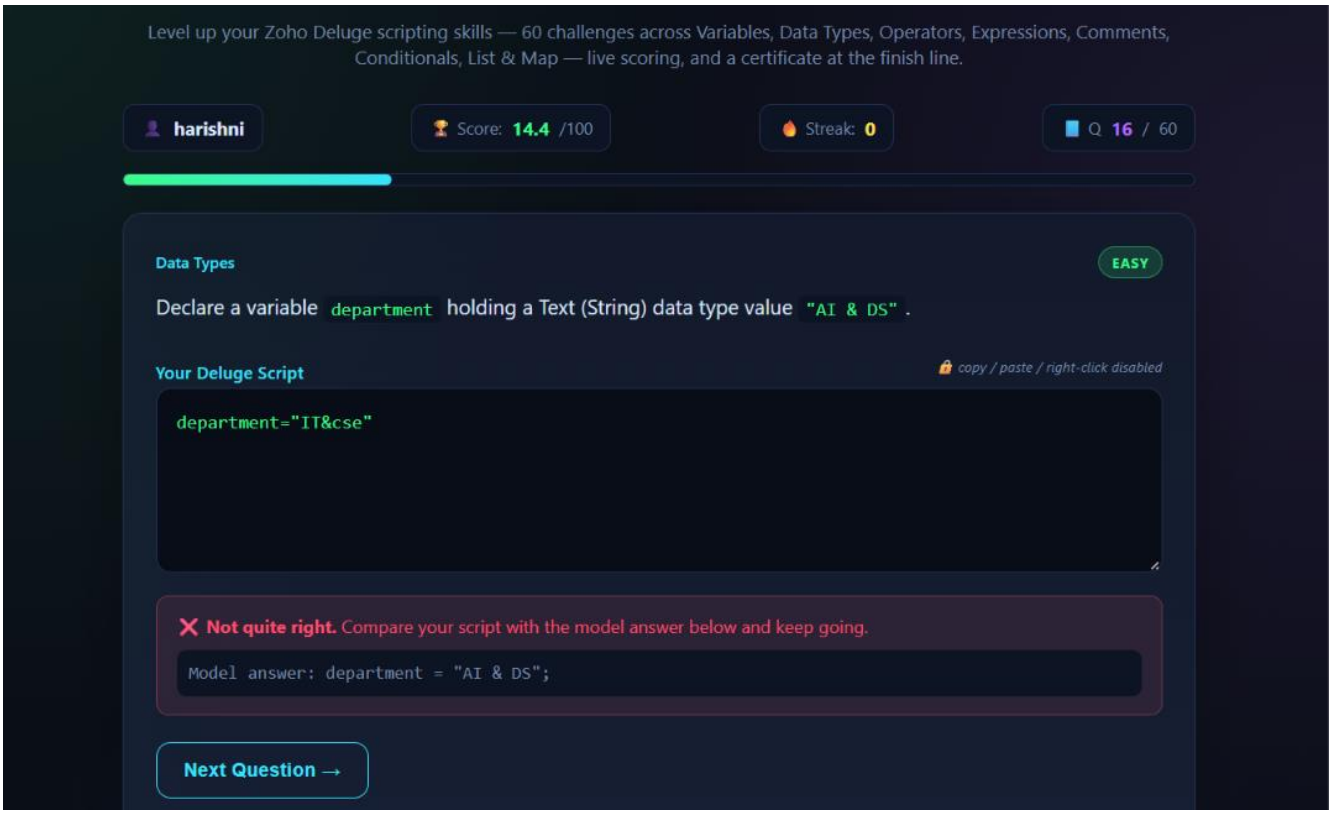

5. Disadvantages

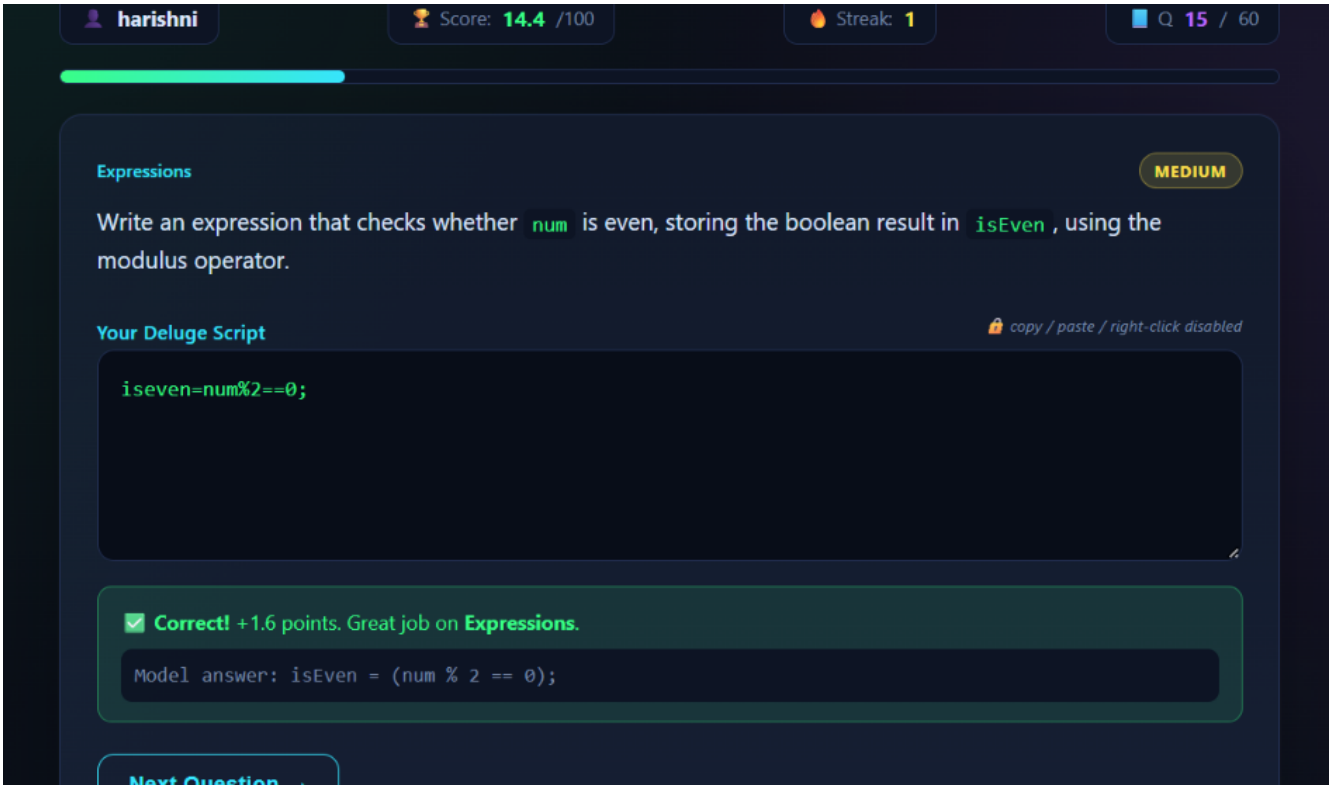

- Deluge is mainly designed for the Zoho ecosystem and is not a general-purpose language.
- Advanced programming requirements may be limited compared with full programming languages.

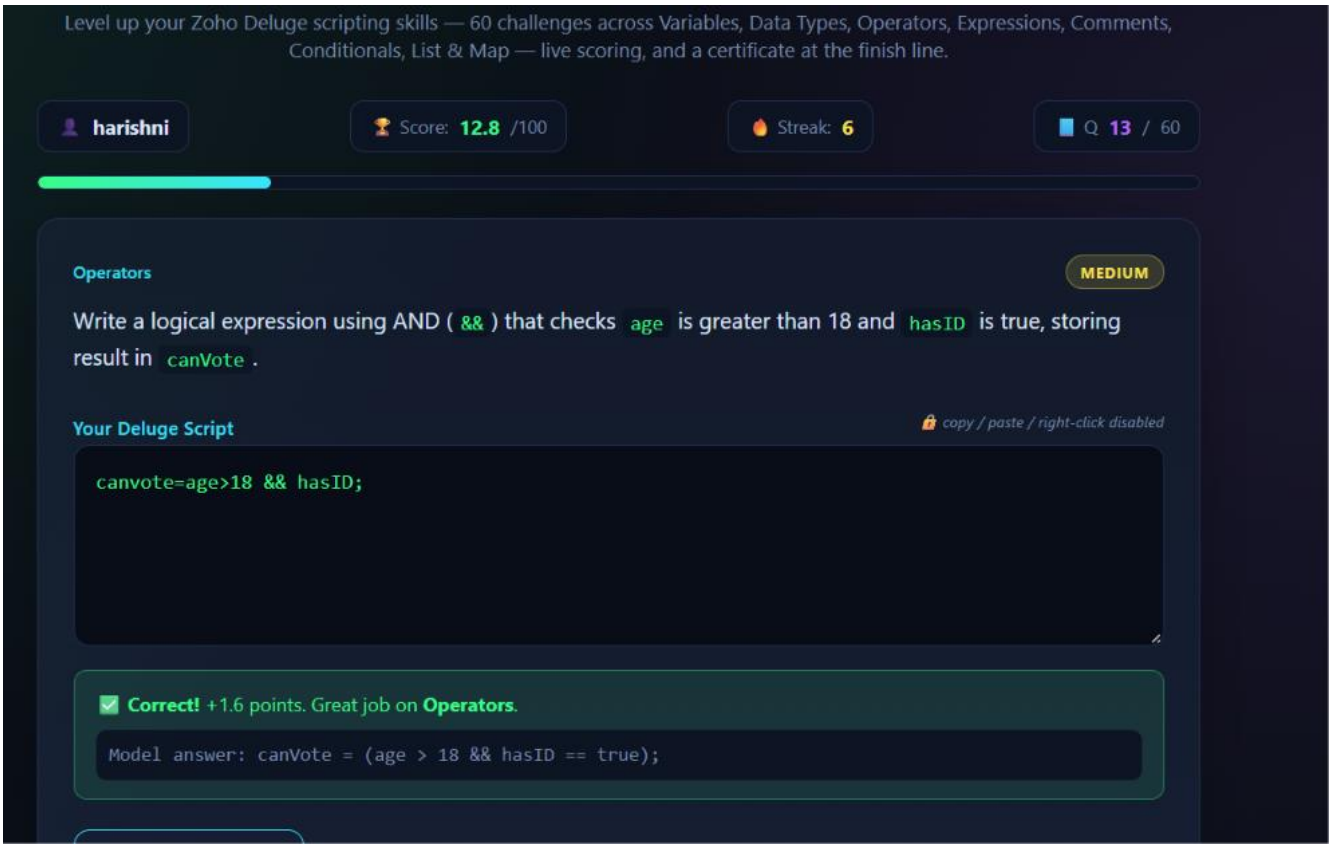

- Complex scripts can become difficult to maintain if they are not properly organized.
- Users need knowledge of Zoho application components to build effective automation.
- Debugging complex scripts may require careful testing and understanding of Deluge functions.

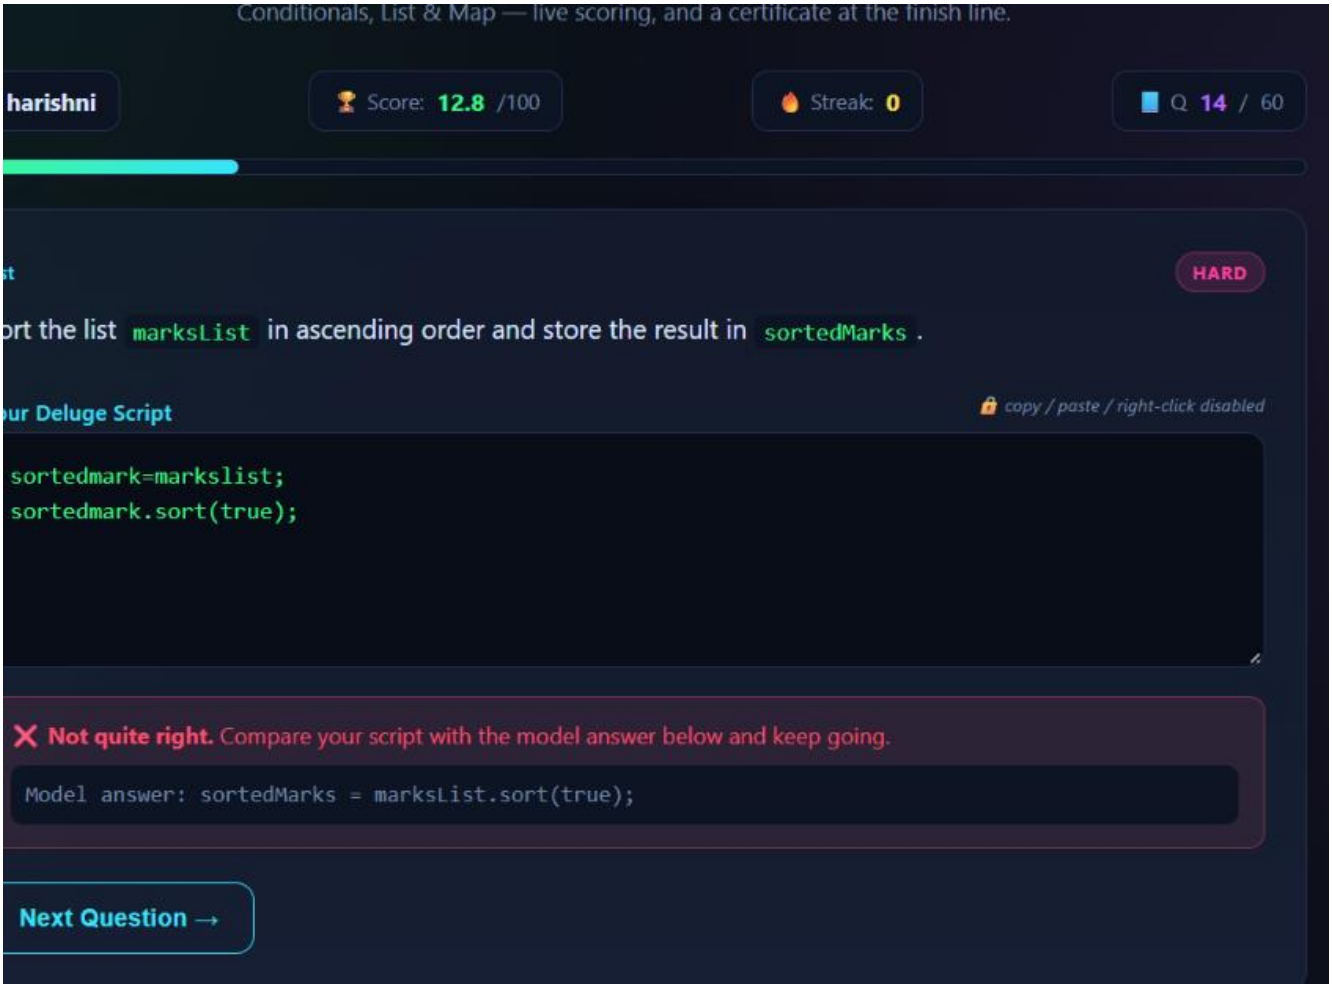

6. Result

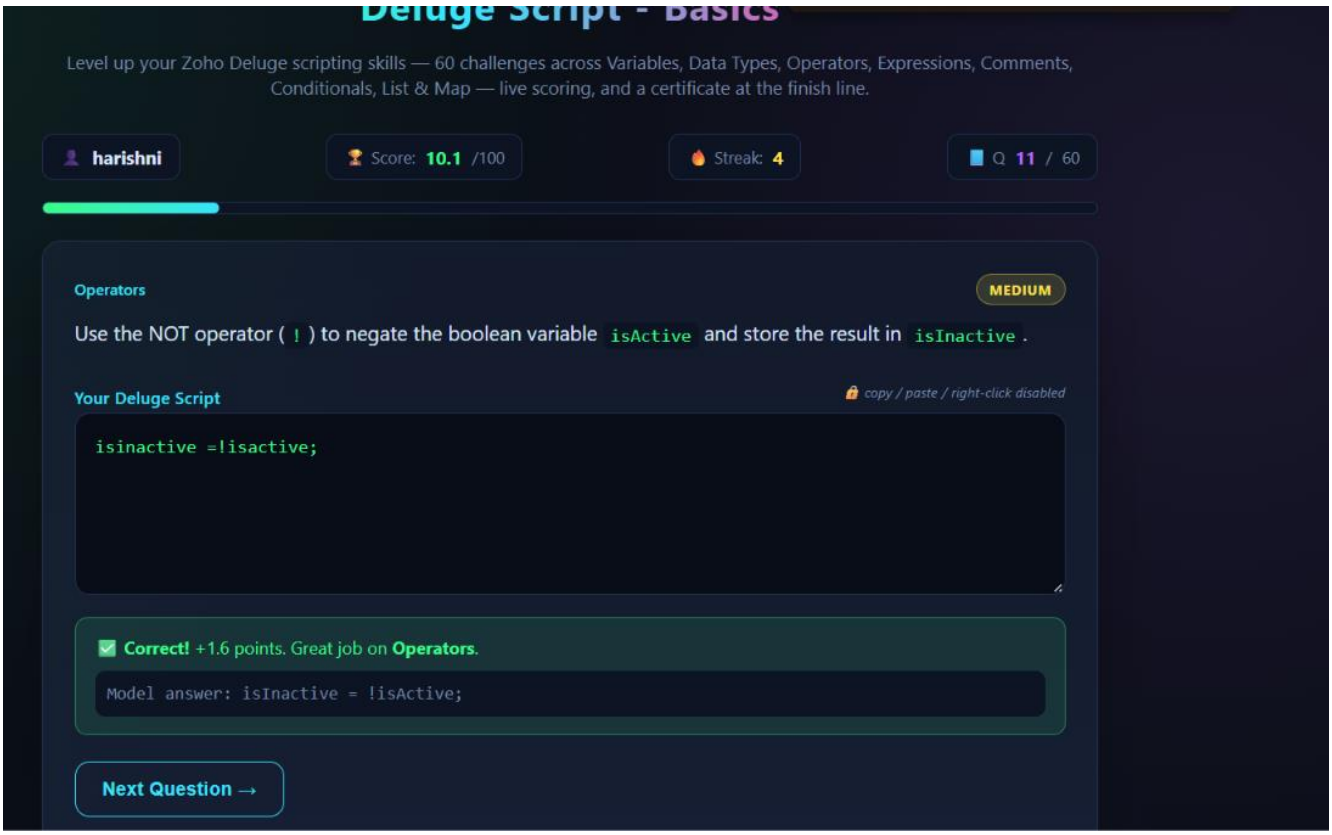

The Deluge Script Basics activity was completed successfully. The exercise provided an understanding of variables, data types, operators, expressions, conditionals, Lists, and Maps in Deluge. It also demonstrated how simple Deluge scripts can be used to perform calculations and implement basic logic for Zoho applications.

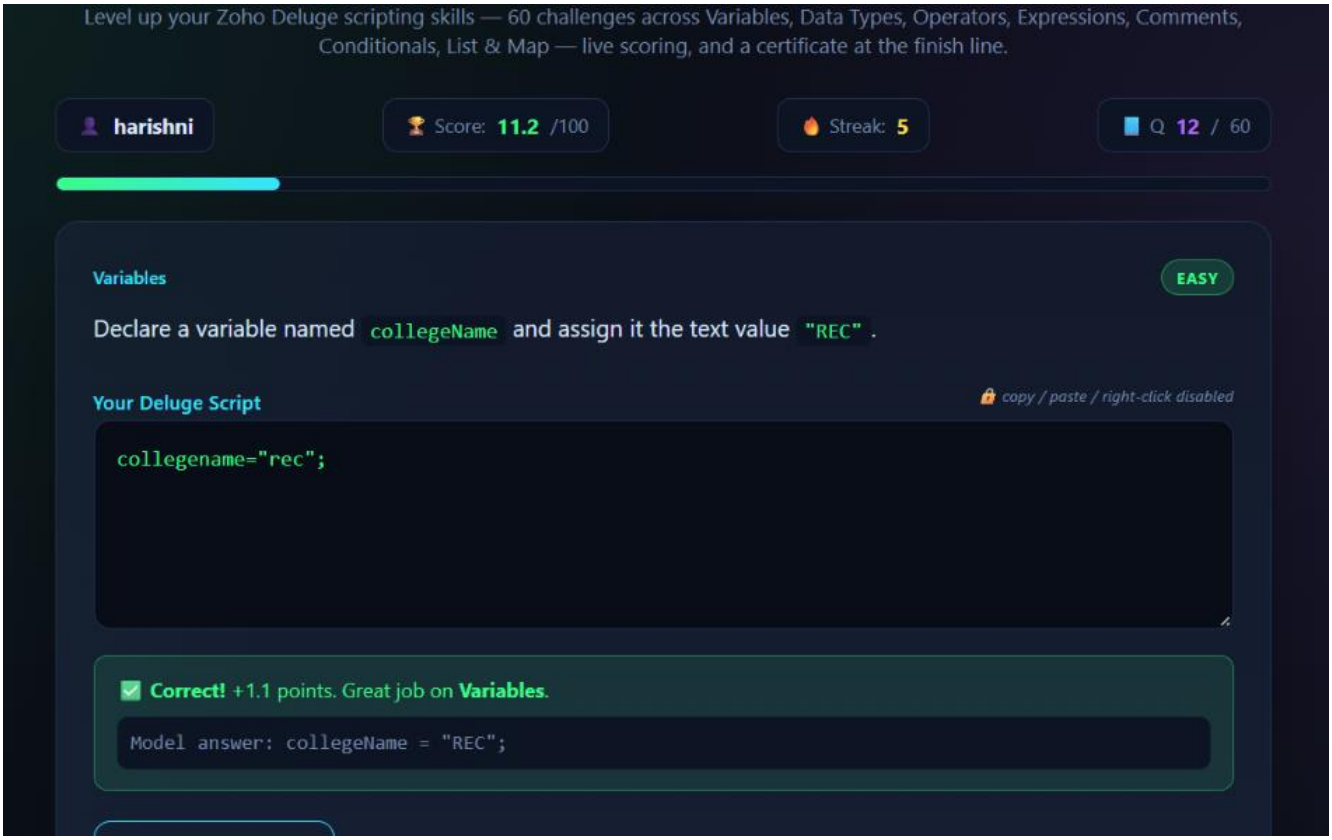

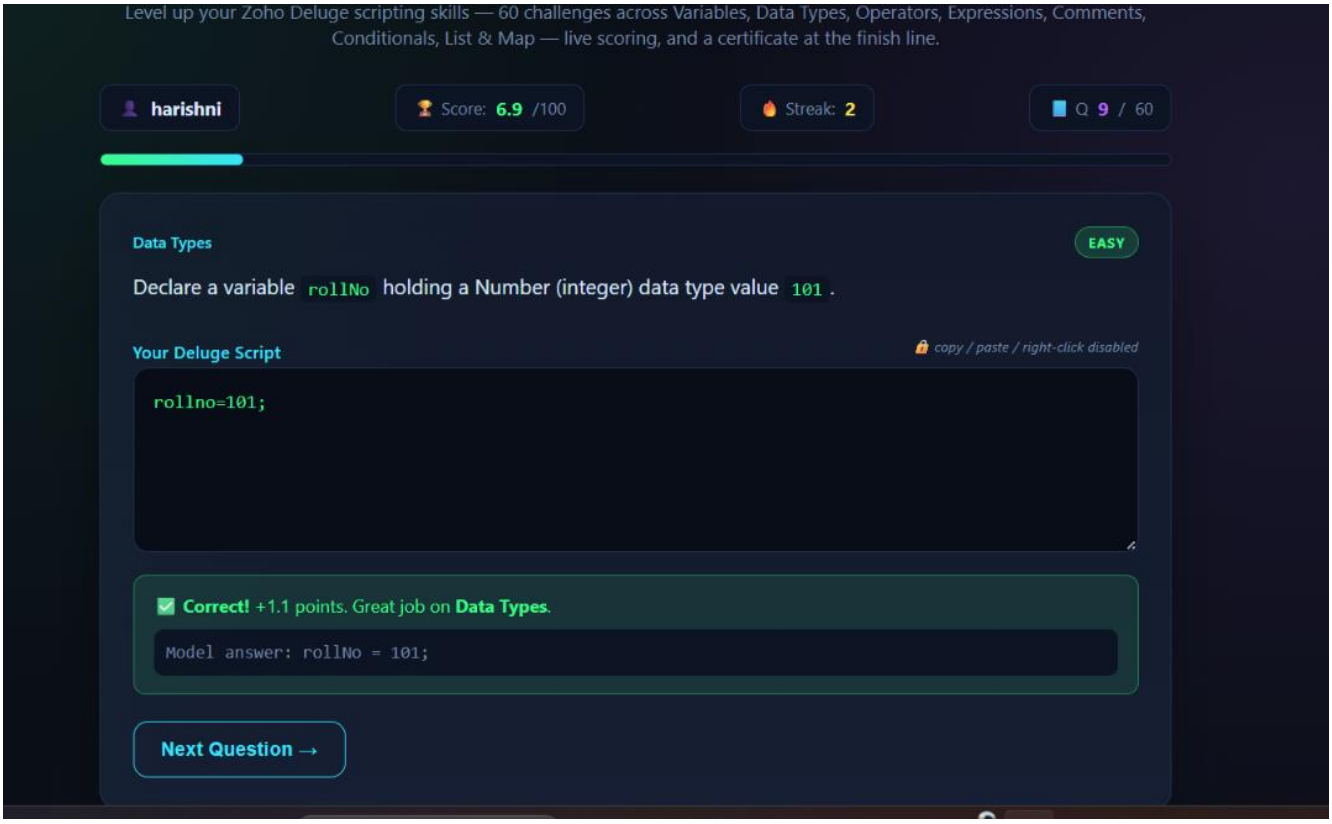

harishni
Score: 14.4 /100
Streak: 1
Q 15 / 60
Expressions
MEDIUM
Write an expression that checks whether num is even, storing the boolean result in isEven, using the modulus operator.
Your Deluge Script
copy / paste / right-click disabled
iseven=num%2==0;
Correct! +1.6 points. Great job on Expressions.
Model answer: isEven = (num % 2 == 0);

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 12.8 /100
Streak: 6
Q 13 / 60
Operators
MEDIUM
Write a logical expression using AND (&&) that checks age is greater than 18 and hasID is true, storing result in canVote .
Your Deluge Script
copy / paste / right-click disabled
canvote=age>18 && hasID;
Correct! +1.6 points. Great job on Operators.
Model answer: canVote = (age > 18 && hasID == true);

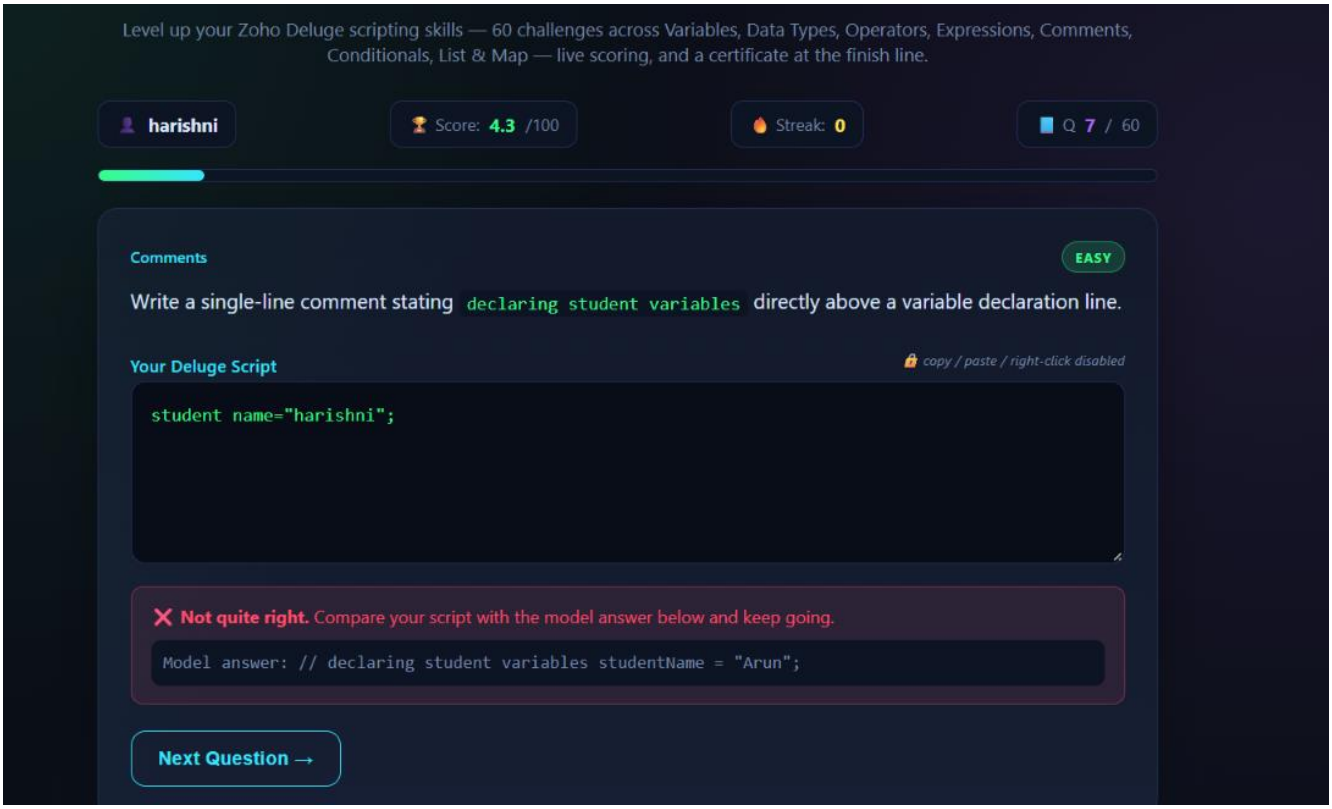

Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 12.8 /100
Streak: 0
Q 14 / 60
HARD
ort the list marksList in ascending order and store the result in sortedMarks .
ur Deluge Script
copy / paste / right-click disabled
sortedmark=markslist;
sortedmark.sort(true);
Not quite right. Compare your script with the model answer below and keep going.
Model answer: sortedMarks = marksList.sort(true);

Deluge Script - Basics
Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 10.1 /100
Streak: 4
Q 11 / 60
Operators
MEDIUM
Use the NOT operator (!) to negate the boolean variable isActive and store the result in isInactive .
Your Deluge Script
copy / paste / right-click disabled
isinactive =!isactive;
Correct! +1.6 points. Great job on Operators.
Model answer: isInactive = !isActive;

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 11.2 /100
Streak: 5
Q 12 / 60
Variables
EASY
Declare a variable named collegeName and assign it the text value "REC".
Your Deluge Script
copy / paste / right-click disabled
collegename="rec";
Correct! +1.1 points. Great job on Variables.
Model answer: collegeName = "REC";

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 6.9 /100
Streak: 2
Q 9 / 60
Data Types
EASY
Declare a variable rollNo holding a Number (integer) data type value 101.
Your Deluge Script
copy / paste / right-click disabled
rollno=101;
Correct! +1.1 points. Great job on Data Types.
Model answer: rollNo = 101;

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 5.9 /100
Streak: 1
Q 8 / 60
Comments
MEDIUM
Write a multi-line comment (using /* and */) that says: This function calculates the result based on marks .
Your Deluge Script
copy / paste / right-click disabled
/*
this function calculates the result based on marks.
*/
Correct! +1.6 points. Great job on Comments.
Model answer: /* This function calculates the result based on marks */

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.
harishni
Score: 4.3 /100
Streak: 0
Q 7 / 60
Comments
EASY
Write a single-line comment stating declaring student variables directly above a variable declaration line.
Your Deluge Script
copy / paste / right-click disabled
student name="harishni";
Not quite right. Compare your script with the model answer below and keep going.
Model answer: // declaring student variables studentName = "Arun";

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.

harishni | Score: 4.3 /100 | Streak: 0 | Q 6 / 60

Map

MEDIUM

Find the number of key-value pairs in the map `student` and store it in `fieldCount`.

Your Deluge Script

copy / paste / right-click disabled

```
fielcount=student.size();
```

Not quite right. Compare your script with the model answer below and keep going.

```
Model answer: fieldCount = student.size();
```

Next Question →

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.

harishni | Score: 4.3 /100 | Streak: 1 | Q 5 / 60

Operators

MEDIUM

Use the string concatenation operator (`+`) to join `"Roll No: "` with the variable `rollNo`, storing it in `label`.

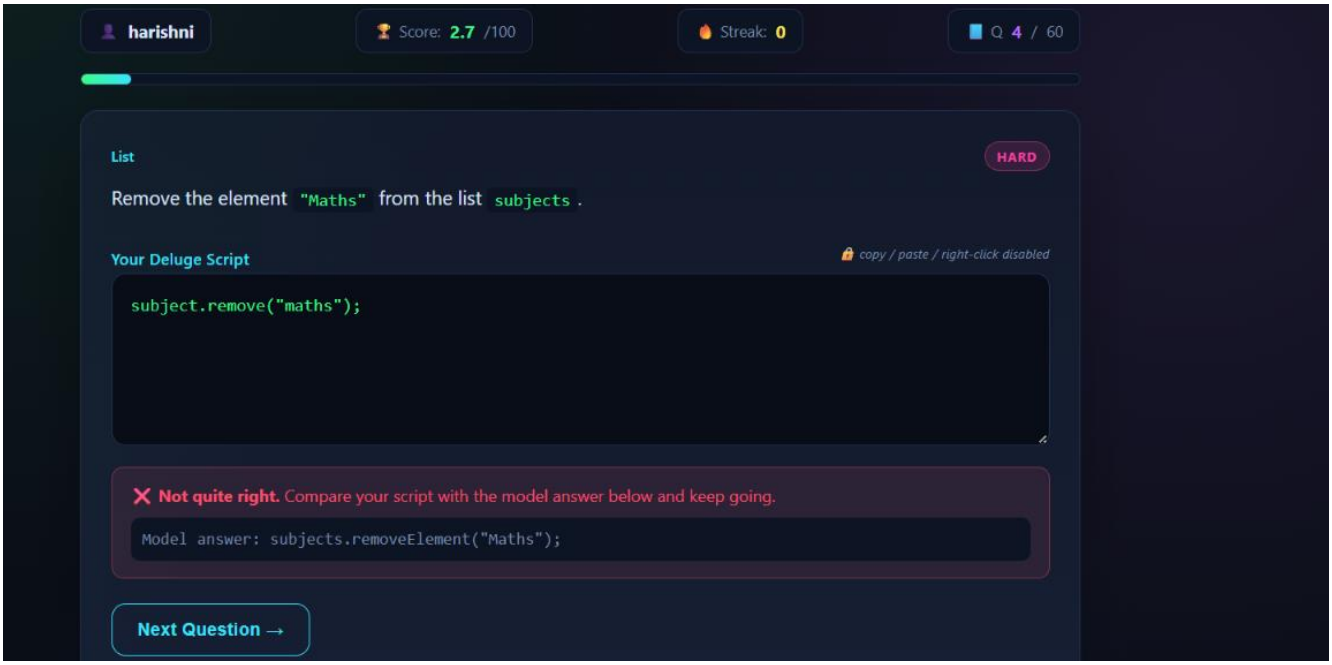

Your Deluge Script

copy / paste / right-click disabled

```
label="roll no:"+rollno;
```

Correct! +1.6 points. Great job on **Operators**.

```
Model answer: label = "Roll No: " + rollNo;
```

harishni
Score: 2.7 /100
Streak: 0
Q 4 / 60
List
HARD
Remove the element "Maths" from the list subjects .
Your Deluge Script
copy / paste / right-click disabled
subject.remove("maths");
Not quite right. Compare your script with the model answer below and keep going.
Model answer: subjects.removeElement("Maths");
